

Alachua County Environmental Protection Department

Chris Bird, Director

March 14, 2008

To Whom It May Concern:

The Alachua County Hazardous Waste Program had a demonstration of Nature's Broom absorbant last year to determine if the product would meet the various needs of our program. Scott Poston, the representative of Nature's Broom, demonstrated the versatility of the absorbant, using products including used oil, antifreeze and latex paint. The product did an outstanding job in absorbing all the products tested and forms into clumps, allowing for easy collection and cleanup.

Our program has used a variety of products over the years to absorb spills and I was very impressed with the Nature's Broom product, it is light weight, the packaging is very well constructed, it works on a variety of materials, uses environmentally responsible ingredients and is reasonably priced. I have been using Nature's Broom for the past year with very favorable results and would recommend the product to anyone that needs a versatile, effective absorbant material.

Sincerely,

Kurt Seaburg
Hazardous Waste Coordinator, Alachua County Environmental Protection Department
